MADE - Steel glass transport

Racks MaDe

Steel glass transport racks are industrial structures designed for the safe storage, handling, and transportation of glass sheets in glass processing facilities. Manufactured from electro-welded steel tubing, they feature an inclined base in either an A-frame or L-frame configuration, with profiles coated in anti-scratch rubber or fitted with wooden protective elements to prevent surface damage. They can be equipped with swivel castors, lifting points for crane handling, or openings designed to accommodate pallet trucks and forklifts.
